SIBLY NOMAN

MECHANICAL ENGINEERING STUDENT · CFD & THERMAL SYSTEMS · AEROSPACE RESEARCH

Kuopio, Finland GitHub /nomansibly LinkedIn Portfolio

Profile

Mechanical engineering student with project experience in computational fluid dynamics, thermal analysis, aerospace systems and sustainability reporting. Interested in reproducible engineering: clear assumptions, traceable models and results reported with their limits.

Education

B.Eng. Mechanical Engineering · Savonia University of Applied Sciences, Finland · 2024–2027

Mechanical Engineering (Aeronautics), previous studies · Universiti Teknologi Malaysia · Sep 2022–Feb 2024

Engineering experience

ESG Analyst · MJH Infra Oy, Kuopio · Sep 2024–Jan 2025

Prepared ESG and responsibility reporting, carbon-footprint analyses and environmental-management emission-reduction strategies.

Research Lead / Researcher · Bored Tunnelers · May 2023–Dec 2025

Guided research and technical investigations for student tunnel-boring-machine development; coordinated interdisciplinary work and communicated design evidence.

CubeSat Sub-lead · DhumketuX · Feb 2023–Dec 2025

Supported subsystem development and integration, design reviews, testing and multidisciplinary project coordination.

Selected engineering projects

Indoor Air Lab — CFD, thermal comfort & ventilation · Python, OpenFOAM, Plotly

Built a screening model and public interactive dashboard; ran coarse 3-D buoyant OpenFOAM URANS cases (3,840 cells, 600 simulated seconds) and documented mesh, timestep and validation limits. Source code.

Micro tunnel boring machine research · Bored Tunnelers

Contributed research planning and technical investigations around cutterhead, thrust and tunneling-system design.

CubeSat subsystem development · DhumketuX

Worked across subsystem design, integration and testing for a student satellite initiative.

Selected publications

IEEE papers (2022): *Effect of Parasitic Element on Multiband CPW-fed NB-IoT Antenna Development for Low-Power Wide-Area Network*; *On the Development of Multiband NB-IoT Antenna for Low-Power Wide Area Network Terminal*; *Antenna Design for University Low Cost Student-Built CubeSat Missions*.

Awards & credentials

2nd place · Project Management Championship, Finnish national final, Team Savonia Synergy (2026) | **Rookie Award** · Not-a-Boring Competition, Bored Tunnelers (2024) | **Top 5 globally** · IMechE Sear Innovation Challenge, Mud Busters (2023)

IPMA Certified Project Management Associate, Level D (2026) · SOLIDWORKS Certifications (2024) · Sandvik Coromant Academy Diploma, Metal Cutting Technology (2025) · Flight Mechanics, ISAE-SUPAERO · Autonomous Aerospace Systems, University of Naples Federico II

Technical toolkit

Simulation: OpenFOAM, CFD, heat transfer, HVAC screening, numerical modelling **Design:** SolidWorks, 3-D CAD, mechanical systems **Compute:** Python, SQLite, Streamlit, Plotly, GitHub **Research:** antenna systems, CubeSat, technical writing, project coordination
